

**NEW PRODUCT!**

# **"NATURE'S HEAD"**

## **COMPOSTING TOILET**

**Designed for many applications including;  
Boats, Campers, Cabins, Basements, RV's, and Trucks.**

Patent pending and completely self-contained waterless toilet. No holding tank, No pump-outs, No odors, No thru-hulls, No clogging, No kidding.

Because of the waterless, urine separating design, this unit has extraordinary holding capacity. This could translate into a month's usage by a cruising couple, or perhaps an entire boating season of weekend usage. With a footprint comparable to that of a "Porta-Potty" type unit, the Nature's Head composting toilet should be easy to install in most applications. Installation consists of bolting the mounting brackets to the floor, venting the unit outside, and hooking up the power source. While the unit is designed to be run on 12 volts, several options are available to fit each application, including a "powerless installation."

With a Gray Granite finish color, the unit measures 13 inches wide at the base, 17 <sup>3</sup>/<sub>4</sub> inches front to rear, and is just under 20 inches tall. It also features a full size molded-in seat for safety and comfort.
